

# HTTP Feed Custom Fields

Cprime Apps has been rebranded as Anova Apps. Please note the only effect is the company name - all of our products' names, logos, functionalities, support, etc. is exactly the same. The new location to our documentation space is <https://anovaapps.atlassian.net>.

## HTTP Feed Custom Fields

HTTP Feed Custom Fields app enables you to retrieve dynamic information from external systems. No more disconnected data that you have to put manually – get it all in your Jira, on required issues, at one place.

This app contains fields that obtain values from HTTP request in XML or JSON formats. Searchers are available for all custom fields.

- JSON Request Custom Field obtains values from JSON response via JSONPath.
- XML Request Custom Field obtains values from XML response via XPath.
- JSON Multi Request Custom Field obtains values from JSON response via JSONPath.
- XML Multi Request Custom Field obtains values from XML response via XPath.

### Easy to configure HTTP requests

Easy to configure values source. You can set basic access authentication and select an HTTP request type.

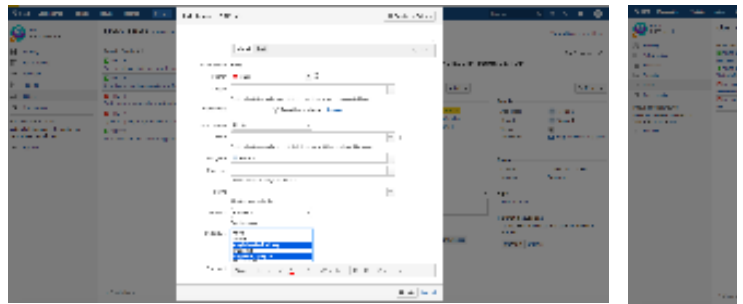

### Feed single and multi select options using JSON or XML

Select field obtains values from a JSON or XML response via JSONPath or XPath.

### Extend Jira functionality with "smart" fields

Create custom fields which can be populated with dynamic datasource.
